

Dream Magic Studio Welcomes Polishing The Professional's Podcast Crew

By: Vanessa Martin Del Campo, Program Assistant

Date: July 27, 2023

The world of media and entertainment is an exciting space for young people aspiring to break into the industry. Yesterday many of our interns had the opportunity to explore Dream Magic Studios ahead of filming for the podcast that they have been working hard at.

Our interns, all unique and creative individuals, immersed themselves in the same studio sets that Kevin Garnett and Kevin Hart have produced successful projects in. This behind-the-scenes adventure allowed them to witness firsthand a project that Kevin Garnett was producing in the studio as we toured the rooms.

As the excitement in the room peaked, our team snapped pictures as they walked through the radio room, make-up room and the green room. The team of interns were curious and full of inspiration as they stepped into the set that they would spend the next couple of months dedicated to bringing the podcast to life.

As we walked through the set with Dream Magic Studios cofounder, Davina Douthard, she explained how this project was the realization of hard work and dedication to becoming successful creatives in the industry. Our intern team, despite all odds and having various disabilities felt encouraged and inspired in their career paths.

Our intern team is composed of hosts, co-hosts, script writers, graphic designers, hair and makeup artists to name a few. Everyone involved has the drive to use this opportunity as a stepping stone for their long-term career goals. No dream is too big at Dream Magic Studios.

We are proud to be able to assist in this opportunity to give individuals with disabilities a chance to demonstrate to the world how talent in the entertainment industry does not always come in a "one size fits all". Dream Magic Studios is a state-of-the-art production

studio that accommodates a wide range of production projects. Offering studio rentals, production services, and post production services; anything is possible here.
